PROFILE

AI-focused software developer with hands-on experience in building RAG-style applications, AI-driven systems, and full-stack systems. Developed an AI-powered email assistant with contextual augmentation for personalized GPT replies, engineered a cognitive assessment app with TFLite models, and deployed scalable ML/AI applications in production using Docker and CI/CD pipelines. Passionate about **LLMs, RAG pipelines** for real-world problem-solving.

EDUCATION

Integrated M.tech (Software Engineering) – CGPA: 8.5 07/2020 – 06/2025
Vellore Institute of Technology vellore, India

HSC (Bio-Maths)-90% and SSLC-95% vellore, India
Seventh-Day Adventist Higher Secondary School

SKILLS

AI/ML & LLMs

Retrieval-Augmented Generation (RAG), LangChain, SLM

Programming Languages

Proficient in Java, C++, Python, and Dart for building web, mobile, and AI-powered applications

Frontend Development

Skilled in HTML, CSS, JavaScript, and React.js for creating responsive and interactive UIs

Backend Development

Experienced in developing RESTful APIs using Node.js, Express.js, and Flask

Mobile App Development

Built and deployed a cross-platform mobile app using Flutter and Firebase

Problem Solving

Solved 100+ problems on LeetCode, demonstrating strong analytical and problem-solving skills.

CERTIFICATES

- Applications of Generative AI using Vertex AI - Google Cloud Platform
- Applied Data Science Powered by Google
- AWS Certified Cloud Practitioner

PROJECTS

World Happiness Prediction Website 🔗

Built a web app using Flask and Python to predict global happiness scores with a Random Forest model trained on indicators like GDP and social support. Designed an intuitive UI for users to input data and view predictions, showcasing both analytical and full-stack development skills.

AI-Powered Email Assistant

I built an AI-powered email assistant that integrates with Gmail to fetch and categorize emails, and implemented a **RAG-style pipeline** by retrieving email content and user preferences from MongoDB to generate personalized GPT-based replies. The system supports scheduled auto-replies for priority emails and ensures seamless inbox tracking through the Gmail API.

Montreal Cognitive Assessment (MoCA) App – Alzheimer's Screening

Built a cross-platform mobile app using Flutter and Firebase to digitize MoCA test components for early Alzheimer's detection. Integrated TFLite models trained on augmented datasets for drawing analysis. Implemented Google Sign-In via Firebase Auth and configured Firebase Storage for result saving.
